5. Änderung vom 14.4.2020, GMBI. Nr. 14

Technische Regeln für Biologische Arbeitsstoffe	Einstufung von Prokaryonten (Bacteria und Archaea) in Risikogruppen	TRBA 466
--	--	-----------------

Die Technischen Regeln für Biologische Arbeitsstoffe (TRBA) geben den Stand der Technik, Arbeitsmedizin und Arbeitshygiene sowie sonstige gesicherte wissenschaftliche Erkenntnisse für Tätigkeiten mit biologischen Arbeitsstoffen, einschließlich deren Einstufung, wieder.

Sie werden vom **Ausschuss für Biologische Arbeitsstoffe (ABAS)** ermittelt bzw. angepasst und vom Bundesministerium für Arbeit und Soziales im Gemeinsamen Ministerialblatt bekannt gegeben.

Die TRBA „Einstufung von Prokaryonten (Bacteria und Archaea) in Risikogruppen“ konkretisiert im Rahmen des Anwendungsbereichs die Anforderungen der Biostoffverordnung. Bei Einhaltung der Technischen Regeln kann der Arbeitgeber insoweit davon ausgehen, dass die entsprechenden Anforderungen der Verordnung erfüllt sind. Die Einstufungen der biologischen Arbeitsstoffe in Risikogruppen werden nach dem Stand der Wissenschaft vorgenommen; der Arbeitgeber hat die Einstufung zu beachten.

Die vorliegende Technische Regel schreibt die Technische Regel „Einstufung von Prokaryonten (Bacteria und Archaea) in Risikogruppen“ (Stand August 2015) fort und wurde unter Federführung des Fachbereichs „Rohstoffe und chemische Industrie“ in Anwendung des Kooperationsmodells (vgl. Leitlinienpapier¹ zur Neuordnung des Vorschriften- und Regelwerks im Arbeitsschutz vom 31. August 2011) erarbeitet.

Inhalt

- 1 Anwendungsbereich
- 2 Allgemeines
- 3 Einstufungen der Prokaryonten (Bacteria und Archaea)
 - 3.1 Vorbemerkungen
 - 3.2 Anmerkungen zur Nomenklatur
 - 3.3 Anmerkungen zur Liste
 - 3.4 Liste der Einstufungen der Prokaryonten (Bacteria und Archaea)
- 4 Literatur

¹ <http://www.gda-portal.de/VorschriftenRegeln/VorschriftenRegeln.html>

1 Anwendungsbereich

Diese TRBA gilt für die Einstufung von Prokaryonten in Risikogruppen gemäß der Verordnung über Sicherheit und Gesundheitsschutz bei Tätigkeiten mit biologischen Arbeitsstoffen (Biostoffverordnung).

2 Allgemeines

(1) Die in dieser TRBA unter Punkt 3.4 aufgeführten Einstufungen von Prokaryonten beinhalten die Legaleinstufungen nach Anhang III der Richtlinie über den Schutz der Arbeitnehmer gegen Gefährdung durch biologische Arbeitsstoffe bei der Arbeit (2000/54/EG) [1] sowie weitere Einstufungen nach dem Stand der Wissenschaft. Nähere Angaben sind der Literatur zu entnehmen [2, 3].

(2) Kriterien für die Einstufung biologischer Arbeitsstoffe sowie ein ausführliches Glossar enthält die TRBA 450 „Einstufungskriterien für biologische Arbeitsstoffe“ [4]. Im Übrigen sind in dieser TRBA die Begriffe so verwendet, wie sie im Begriffsglossar zu den Regelwerken der Betriebssicherheitsverordnung (BetrSichV), Biostoffverordnung (BioStoffV) und der Gefahrstoffverordnung (GefStoffV) des ABS, ABAS und AGS bestimmt sind.

(3) Für die Einstufung ist das von den Prokaryonten ausgehende Infektionsrisiko für den gesunden Beschäftigten maßgebend. Entsprechend erfolgt eine Zuordnung zu den Risikogruppen 2 bis 4. Die Liste der Einstufungen enthält auch Prokaryonten, bei denen es unwahrscheinlich ist, dass sie beim Menschen eine Krankheit verursachen und die deshalb der Risikogruppe 1 zugeordnet sind.

(4) Neu entdeckte und/oder noch nicht bewertete Prokaryonten sind vom Arbeitgeber gemäß den in der TRBA 450 aufgeführten Einstufungskriterien nach dem Stand der Wissenschaft einzustufen.

(5) Für Einstufungsfragen steht der Expertenkreis „Wissenschaftliche Bewertung und Einstufung“ des ABAS² beratend zur Verfügung.

3 Einstufungen der Prokaryonten (Bacteria und Archaea)

3.1 Vorbemerkungen

(1) Die Legaleinstufungen nach Anhang III der Richtlinie 2000/54/EG sind in der Liste in Abschnitt 3.4 durch **Fettdruck** hervorgehoben.

(2) *Archaea* sind in der Liste unter 3.4 kursiv ausgewiesen.

² Anschrift: Geschäftsführung des ABAS, Bundesanstalt für Arbeitsschutz und Arbeitsmedizin, Nöldnerstr. 40/42, 10317 Berlin

(3) Bei bestimmten Biostoffen, die in die Risikogruppe 3 eingestuft und in der Liste mit zwei Sternchen (**) versehen wurden, ist das Infektionsrisiko für Arbeitnehmer begrenzt, da eine Übertragung über den Luftweg normalerweise nicht erfolgen kann. Weitergehende Informationen zu Infektionsquellen, zum Übertragungsweg und zu spezifischen Schutzmaßnahmen einschließlich Inaktivierungsmaßnahmen enthält die TRBA 100 „Schutzmaßnahmen für Tätigkeiten mit biologischen Arbeitsstoffen in Laboratorien“ [5].

(4) Stämme, deren Virulenz nachweislich abgeschwächt ist oder die bekannte Virulenzfaktoren verloren, haben, können vorbehaltlich einer angemessenen Ermittlung und Bewertung in eine niedrigere Risikogruppe eingestuft werden als der Elternstamm (parentaler Stamm); ist der Elternstamm in die Risikogruppe 3 oder 4 eingestuft, kann eine Herabstufung nur auf der Grundlage einer wissenschaftlichen Bewertung erfolgen, die insbesondere der Ausschuss für Biologische Arbeitsstoffe vornehmen kann.

(5) Die umfangreiche Gruppe der Cyanobakterien wurde wegen der noch unklaren Klassifizierung und Nomenklatur nicht in die nachfolgende Liste übernommen.

Es sind bisher keine Cyanobakterien bekannt, die beim Menschen Infektionskrankheiten verursachen können, so dass diese Arten der Risikogruppe 1 zugeordnet werden können. Bei der Gefährdungsbeurteilung ist jedoch die Toxinbildung einiger Spezies zu berücksichtigen [2, 3].

(6) Sollten Artennamen in der Liste nicht aufzufinden sein, handelt es sich dabei entweder um ungültige oder lange überholte Bezeichnungen oder um Namen von Cyanobakterien oder Prokaryontenarten, die erst kürzlich umbenannt oder neu beschrieben wurden.

(7) In der Liste in 3.4 finden sich neben den für den Arbeitsschutz relevanten Einstufungen auch zusätzliche Hinweise auf Tier- oder Pflanzenpathogenität.

3.2 Anmerkungen zur Nomenklatur

– Gleichheitszeichen (=)

Werden zwei verschiedene Bezeichnungen für eine Art verwendet, die durch den gleichen Typstamm repräsentiert werden und deren Namen beide formal gültig sind (homotypische Synonyme), wird darauf durch ein Gleichheitszeichen (=) aufmerksam gemacht, und die Art wird in der Liste unter beiden Bezeichnungen geführt.

Beispiel: *Brevibacterium albidum* = *Curtobacterium albidum*
Curtobacterium albidum = *Brevibacterium albidum*

– synonym

Werden zwei verschiedene Bezeichnungen für eine Art verwendet, die durch unterschiedliche Typstämme repräsentiert werden und deren Namen beide formal gültig sind (heterotypische Synonyme), von denen jedoch einer formal Priorität gegenüber dem anderen besitzt, wird darauf mit dem Hinweis „synonym“ verwiesen.

Beispiel: *Acetivibrio cellulosolvens* – synonym: *Acetivibrio cellulolyticus*

Dabei besitzt die an zweiter Stelle (nach „synonym“) genannte Bezeichnung nach den Regeln der Nomenklatur (International Code of Nomenclature of Bacteria) Priorität und wird deshalb mit den für die Einstufung relevanten Informationen versehen.

– **Pfeil (→)**

Arten, deren Bezeichnungen nach dem 1.1.1980 geändert wurden, sind in dieser Liste unter allen seither verwendeten Bezeichnungen zu finden: Bei der früheren Bezeichnung ist durch einen Pfeil „→“ vermerkt, in welche Gattung bzw. Spezies der Prokaryont inzwischen eingeordnet wurde. Darüber hinaus wird (werden) die frühere(n) Bezeichnung(en) noch einmal in Klammern () hinter der heute gültigen Bezeichnung wiederholt. Einstufung und evtl. Bemerkungen sind nur hinter dem gegenwärtig gültigen Namen zu finden.

Beispiel: *Ampullariella regularis* → *Actinoplanes regularis*
Actinoplanes regularis (*Ampullariella regularis*)

In Einzelfällen, z. B. bei häufigem industriellen Gebrauch, sind auch ältere Bezeichnungen aufgeführt.

– **Anführungszeichen („...“)**

Ungültige Artbezeichnungen, soweit sie gebräuchlich waren und eindeutig eine existierende Prokaryontenart kennzeichneten, sind – neben der gültigen Bezeichnung wie bei Namensänderungen nach dem 1.1.1980 – in Anführungszeichen gesetzt.

Beispiel: *Actinomyces meyeri* („*Actinobacterium*“ *meyeri*).

3.3 Anmerkungen zur Liste

– **Farbliche Hinterlegung einzelner Spezies**

Die Einstufungen der Spezies in die Risikogruppen 2, 3 und 3(**) sind in der Tabelle farblich hinterlegt.

Hellblau: Einstufung in Risikogruppe 2

Hellgelb: Einstufung in Risikogruppe 3 oder 3 (**)

– **In der Spalte „Bemerkungen“ verwendete Kennzeichnungen**

- + In Einzelfällen als Krankheitserreger nachgewiesen oder vermutet, überwiegend bei erheblich abwehrgeminderten Menschen; Identifizierung der Art oft nicht zuverlässig.
- ht Pathogen für Mensch und Wirbeltiere, aber i.d.R. keine Übertragung zwischen beiden Wirtsgruppen.

- ht+ In Einzelfällen als Krankheitserreger von Menschen und Wirbeltieren nachgewiesen oder vermutet, überwiegend bei erheblich abwehrgeminderten Menschen oder Tieren; Identifizierung der Art oft nicht zuverlässig.
- n Pathogen für Nichtwirbeltiere (Wirbellose); die Kennzeichnung mit „n“ erhebt allerdings keinen Anspruch auf Vollständigkeit. In Spezies ohne diese Kennzeichnung können deshalb ggf. auch Stämme mit den Merkmalen „n“ vorkommen.
- n+ In Einzelfällen bei Wirbellosen nachgewiesen und als Krankheitserreger dieser Lebewesen vermutet; ein endgültiger Beweis für die Pathogenität für Wirbellose steht aber noch aus.
- n2 Wegen der Pathogenität für wirbellose Tiere können Sicherheitsmaßnahmen erforderlich werden, die, vergleichbar mit den Sicherheitsmaßnahmen der Schutzstufe 2, ein Entweichen des Prokaryonten in die äußere Umgebung bzw. in andere Arbeitsbereiche minimieren.
- p Pathogen für Pflanzen; als pflanzenpathogen werden ausschließlich Prokaryonten bezeichnet, von denen bekannt ist, dass sie Pflanzenkrankheiten verursachen. Die Kennzeichnung mit „p“ erhebt allerdings keinen Anspruch auf Vollständigkeit. In Spezies ohne diese Kennzeichnung können deshalb ggf. auch Stämme mit den Merkmalen „p“ vorkommen.
Aufgrund des Pflanzenschutzgesetzes können über die hier unter dem Gesichtspunkt des Arbeitsschutzes vorgenommene Einstufung hinaus Maßnahmen erforderlich sein.
- p+ In Einzelfällen in oder auf erkrankten Pflanzen nachgewiesen und als Ursache der Pflanzenkrankheit vermutet; ein endgültiger Nachweis der Pflanzenpathogenität ist noch zu erbringen.
- p2 Wegen der Pflanzenpathogenität können aus pflanzenschutzrechtlicher Sicht Sicherheitsmaßnahmen erforderlich werden, die, vergleichbar mit den Sicherheitsmaßnahmen der Schutzstufe 2, ein Entweichen des Prokaryonten in die äußere Umgebung bzw. in andere Arbeitsbereiche minimieren.
- p3 Wegen der Pflanzenpathogenität können aus pflanzenschutzrechtlicher Sicht Sicherheitsmaßnahmen erforderlich werden, die, vergleichbar mit den Schutzmaßnahmen der Schutzstufe 3, ein Entweichen des Prokaryonten in die äußere Umgebung bzw. in andere Arbeitsbereiche verhindern.
- t Pathogen für Wirbeltiere; der Mensch wird unter natürlichen Bedingungen nicht befallen. Wegen der geringen Wirtsspezifität pathogener Prokaryonten können allerdings auch von den meisten primär nur tierpathogenen Arten bei Arbeiten mit hohen Erregerkonzentrationen Infektionsgefahren für die Beschäftigten ausgehen. Solche Arten wurden deshalb

der Risikogruppe 2 mit der Zusatzbemerkung „t“ zugeordnet. Ist ein Prokaryont unter natürlichen Bedingungen sowohl human- als auch tierpathogen, wird die Kennzeichnung mit „ht“ verwendet.

- t+ In Einzelfällen als Krankheitserreger bei Wirbeltieren nachgewiesen oder vermutet; ein endgültiger Nachweis der Tierpathogenität ist noch zu erbringen. Hinweise auf Humanpathogenität fehlen.
- t2 Wegen der Wirbeltierpathogenität können aus tierseuchenrechtlicher Sicht Sicherheitsmaßnahmen erforderlich werden, die, vergleichbar mit den Sicherheitsmaßnahmen der Schutzstufe 2, ein Entweichen des Prokaryonten in die äußere Umgebung bzw. in andere Arbeitsbereiche minimieren.
- t3 Wegen der Wirbeltierpathogenität können aus tierseuchenrechtlicher Sicht Sicherheitsmaßnahmen erforderlich werden, die, vergleichbar mit den Sicherheitsmaßnahmen der Schutzstufe 3, ein Entweichen des Prokaryonten in die äußere Umgebung bzw. in andere Arbeitsbereiche verhindern.
- T Toxinproduktion: Prokaryonten, die zur Bildung von Exotoxinen befähigt sind. Die Kennzeichnung mit „T“ erhebt allerdings keinen Anspruch auf Vollständigkeit, d. h. auch in Prokaryontenarten ohne diese Kennzeichnung können ggf. Exotoxin bildende Stämme vorkommen. Die Kennzeichnung mit „T“ wurde aus Anhang III der EG-Richtlinie 2000/54/EG übernommen.
- TA Arten, von denen Stämme bekannt sind, die langjährig sicher in der technischen Anwendung gehandhabt wurden. Diese bewährten Stämme können daher nach den Einstufungskriterien in die Risikogruppe 1 fallen. Die Kennzeichnung mit „TA“ erhebt allerdings keinen Anspruch auf Vollständigkeit. In Spezies ohne diese Kennzeichnung können deshalb ggf. auch Stämme mit den Merkmalen „TA“ vorkommen.
- V Wirksamer Impfstoff verfügbar. Die Kennzeichnung mit „V“ wurde aus Anhang III der EG-Richtlinie 2000/54/EG übernommen.
Hinweis: Diese Kennzeichnung besagt nur, dass ein Impfstoff verfügbar ist, nicht jedoch, ob er allumfassend wirksam ist und eine Impfung von der Ständigen Impfkommission (STIKO) empfohlen wird.
- Z Die in dieser TRBA mit „Z“ gekennzeichneten Bakterien umfassen die in der Richtlinie 2003/99/EG [6] genannten Zoonoseerreger sowie weitere, unter Punkt B.4. Anhang I der Richtlinie 2003/99/EG fallende, aber dort nicht namentlich genannte Bakterien. Diese Kennzeichnungen entstammen den DGUV Informationen 213-090 und 213-091 „Sichere Biotechnologie – Einstufung biologischer Arbeitsstoffe: Prokaryonten (Bacteria und Archaea)“ der Berufsgenossenschaft Rohstoffe und chemischen Industrie [2, 3].

Zoonoseerreger sind sämtliche Viren, Bakterien, Pilze, Parasiten oder sonstige biologische Einheiten, die Zoonosen verursachen können.

Zoonosen sind sämtliche Krankheiten und/oder sämtliche Infektionen, die auf natürlichem Weg direkt oder indirekt zwischen Tieren und Menschen übertragen werden können.

– In der Spalte „Status“ verwendete Abkürzungen

Die in der Spalte „Status“ verwendeten Abkürzungen erklären sich wie folgt:

neu: Neu in die Einstufungsliste aufgenommene Spezies

Bem.: Änderung der Bemerkung

Einst.: Änderung der Einstufung

Korr.: Korrektur des Speziesnamens

Umb.: Taxonomische Umbenennung

⁵ Genomanalysen und -sequenzvergleiche (Scholz, H., Banai, M., Cloeckaert, A., Kämpfer, P. & Whatmore, A.M., Genus Brucella (Meyer&Shaw 1920), in: Bergey's Manual of Systematics of Archaea and Bacteria, online 2018) bestätigen das sogenannte „Multispezies-Konzept“, in dem die sechs Brucella “nomenspecies” abortus, canis, melitensis, neotomae, ovis und suis als eigenständige Spezies abgegrenzt werden, die taxonomisch beschrieben und deren Namen validiert sind (Osterman, B. & Moriyon, I., International Committee on Systematics of Prokaryotes, Subcommittee on the Taxonomy of Brucella, IJSEM, 56, 1173-1175, 2006).

⁶ Menschliche Erkrankungen, verursacht durch *Brucella microti* wurden bisher noch nicht beschrieben, können aber wegen der nahen Verwandtschaft zu anderen Brucellose-Erregern auch nicht sicher ausgeschlossen werden.

¹² Aufgrund von Genomanalysen und -sequenzvergleichen (Riojas, M.A., McGough, K.J., Rider-Riojas, C.J., Rastogi, N. & Hazbon, M.H., IJSEM, 68 (1), 324-332, 2018) wurde die Reklassifizierung der Spezies des Mycobacterium tuberculosis-Komplexes vorgeschlagen. Demnach sind Mycobacterium africanum, bovis, caprae, microti und pinnipedii heterotypische Synonyme von Mycobacterium tuberculosis. Der Name Mycobacterium tuberculosis hat aufgrund der Erstbeschreibung formal Priorität (M. africanum/bovis/caprae/microti/pinnipedii – synonym: M. tuberculosis).

<i>Yersinia enterocolitica</i> subsp. <i>palearctica</i>	2	Z	
<i>Yersinia entomophaga</i>	1	n	
<i>Yersinia frederiksenii</i>	2	Z	
<i>Yersinia intermedia</i>	2	Z	
<i>Yersinia kristensenii</i>	2	Z	
<i>Yersinia massiliensis</i>	1		
<i>Yersinia mollaretii</i>	1		
<i>Yersinia nurmii</i>	1		
<i>Yersinia pekkanenii</i>	1		
<i>Yersinia pestis</i>	3	V, Z	
<i>Yersinia philomiragia</i> → <i>Francisella philomiragia</i> subsp. <i>philomiragia</i>			
<i>Yersinia pseudotuberculosis</i>	2	Z	
<i>Yersinia rhodei</i>	1 ^G	+	
<i>Yersinia ruckeri</i>	1 ^G	t2	
<i>Yersinia similis</i>	2	Z	
<i>Yersinia wautersii</i>	2	Z	neu
<i>Yimella</i>			
<i>Yimella lutea</i>	1		
<i>Yimella radicis</i>	1		neu
<i>Yokenella – synonym: Koserella</i>			
<i>Yokenella regensburgei</i> – synonym: <i>Koserella trabulsi</i>			
<i>Yonghaparkia</i>			
<i>Yonghaparkia alkaliphila</i>	1		
<i>Youhaiella</i>			
<i>Youhaiella tibetensis</i>	1		neu
<i>Youngiibacter</i>			
<i>Youngiibacter fragilis</i>	1		
<i>Youngiibacter multivorans</i> (<i>Acetivibrio multivorans</i>)	1		
<i>Youngimonas</i>			
<i>Youngimonas vesicularis</i>	1		neu
<i>Yuhushiella</i>			
<i>Yuhushiella deserti</i>	1		
<i>Zavarzinella</i>			
<i>Zavarzinella formosa</i>	1		
<i>Zavarzinia</i>			
<i>Zavarzinia compransoris</i>	1		
<i>Zeaxanthinibacter</i>			
<i>Zeaxanthinibacter aestuarii</i>	1		neu
<i>Zeaxanthinibacter enoshimensis</i>	1		

Spezies	Risikogruppe	Bemerkung	Status
Zhangella → Maritalea			
Zhangella mobilis → Maritalea porphyrae			
Zhihengliuella			
Zhihengliuella aestuarii → Neomicrococcus aestuarii			Umb.
Zhihengliuella alba	1		
Zhihengliuella flava	1		
Zhihengliuella halotolerans	1		
Zhihengliuella salsuginis	1		
Zhihengliuella somnathii	1		neu
Zhizhongheella			
Zhizhongheella caldifontis	1		neu
Zhongshania			
Zhongshania aliphaticivorans	1		neu
Zhongshania antarctica	1		
Zhongshania borealis (Spongiibacter borealis)	1		Umb.
Zhongshania guokunii	1		
Zhouia			
Zhouia amylolytica	1		
Zimmermannella = Pseudoclavibacter			
„Zimmermannella alba“	1	+	
„Zimmermannella bifida“	1	+	
„Zimmermannella faecalis“	1		
Zimmermannella helvola = Pseudoclavibacter helvolus	1		
Zobellella			
Zobellella aerophila	1		
Zobellella denitrificans	1		
Zobellella taiwanensis	1		
Zobellia			
Zobellia amurskyensis	1		
Zobellia galactanivorans	1		
Zobellia laminariae	1		
Zobellia russellii	1		
Zobellia uliginosa (Flavobacterium uliginosum, Cytophaga uliginosa, Cellulophaga uliginosa)	1		
Zoogloea			
Zoogloea caeni	1		
Zoogloea oleivorans	1		neu
Zoogloea oryzae	1		
Zoogloea ramigera	1		
Zoogloea resiniphila	1		
Zooshikella			
Zooshikella ganghwensis	1		
Zooshikella marina	1		neu
Zunongwangia			
Zunongwangia atlantica	1		
Zunongwangia endophytica	1		neu

Spezies	Risikogruppe	Bemerkung	Status
Zunongwangia mangrovi	1		
Zunongwangia profunda (Wangia profunda)	1		
Zymobacter			
Zymobacter palmae	1		
Zymomonas			
Zymomonas mobilis subsp. francensis	1		
Zymomonas mobilis subsp. mobilis	1		
Zymomonas mobilis subsp. pomacea	1		
Zymophilus			
Zymophilus paucivorans → Propionispira paucivorans			Umb.
Zymophilus raffinosivorans → Propionispira raffinosivorans			Umb.
