Dear Sebastian,

all three T1 cell lines grow in
IMDM + 10% FCS + 1% PenStrepAmpho + 1% L-Glutamin + ([Avapritinib 100mM](#) for the G680R)

The **882** grow in
RPMI1640 + 15% FCS + 1% PenStrepAmpho + 1% L-Glutamin

GIBCO	RPMI1640 Medium	21875034
GIBCO	Iscove's Modified Dulbecco's Medium (IMDM) (1X)	12440053
Sigma Aldrich	Fetal Bovine Serum	F-7524-500mL
Invitrogen	Penicillin-Streptomycin, liquid, 100ml	15140-122
	inkl. Amphotericin B solubilized	A9528-50MG (<i>dissolve in 10mL</i>)
<i>A.Braun, add 500µL/100mL PenStrep, aliquot and freeze -20°C</i>		
Sigma Aldrich	L-Glutamine solution 200mM	G7513-100ML

Let us know, when everything is readily available in your lab and we will plan the shipping.
We recommend not changing the media composition – especially not on the GIST 882 as they are the most sensible GIST cells and don't deal well with change in culturing conditions.
Shipping within Germany at room temperature is comparatively cheap. I would guess around 100€. We would ship with DHL, let us know whether you have another courier you would prefer.

Best,
Julia

Betreff: AW: GIST Cell Lines

Hi Sebastian, no worries. We can provide that Information beforehand - Julia will send you the spreadsheet for the cells.

She probably also knows how much shipping at ambient temperature within Germany Costs. It should be very little.

Kind regards,
seb

Betreff: Re: GIST Cell Lines

Dear Prof. Bauer,

Rainer was asking which costs or obligations occur with the shipment of the cells but accidentally only responded to me. Thus, I forwarded his mail.

I also talked to Katharina Achazi who is the head of our BioLab and put her into the CC of this mail.

She said that we need to know if one of the cell lines is classified as S2 or if all of them are classified as S1. Is there a chance that you have such a datasheet? Also, she said that we need to have all the required substances for the preparation of the cell media ready before they arrive. Is there a chance that you could also forward us this information prior to shipment?

Regarding the Shipment our address is the following:

Freie Universität Berlin - Forschungsbau SupraFAB
Altensteinstraße 23a, 14195 Berlin
Raum 111

Thank you in advance and with kind regards

Sebastian Schötz

Dear Prof. Bauer,

Recently I had a meeting with Avi and he agreed on ordering the cells.

as we discussed we would like to order the following 4 GIST cell lines from you.

GIST T1
GIST882
T1- α -D842V
T1- α -D842V+G680R

Would that be possible?

With kind regards

Sebastian Schötz
